## **Java Quick Reference**

Accessible methods from the Java library that may be included in the exam

chant length()  String substring(int from, int to)  String substring(int from)  Ent indexOf(String str)  Coolean equals(String other)  Ent compareTo(String other)  Enteger.MIN_VALUE  Enteger.MAX_VALUE  Ent intValue()	Constructs a new String object that represents the same sequence of characters as str  Returns the number of characters in a String object  Returns the substring beginning at index from and ending at index to - 1  Returns substring(from, length())  Returns the index of the first occurrence of str; returns -1 if not found  Returns true if this is equal to other; returns false otherwise  Returns a value <0 if this is less than other; returns zero if this is equal to other; returns a value >0 if this is greater than other  Integer Class  Constructs a new Integer object that represents the specified int value of the minimum value represented by an int or Integer  The maximum value represented by an int or Integer  Returns the value of this Integer as an int  Double Class
chant length()  String substring(int from, int to)  String substring(int from)  Ent indexOf(String str)  Coolean equals(String other)  Ent compareTo(String other)  Enteger.MIN_VALUE  Enteger.MAX_VALUE  Ent intValue()	Returns the number of characters in a String object Returns the substring beginning at index from and ending at index to - 1 Returns substring(from, length()) Returns the index of the first occurrence of str; returns -1 if not found Returns true if this is equal to other; returns false otherwise Returns a value <0 if this is less than other; returns zero if this is equal to other; returns a value >0 if this is greater than other  Integer Class Constructs a new Integer object that represents the specified int value The minimum value represented by an int or Integer Returns the value of this Integer as an int
tring substring(int from, int to)  String substring(int from)  Ant indexOf(String str)  Coolean equals(String other)  Ant compareTo(String other)  Cinteger(int value)  Cinteger.MIN_VALUE  Cinteger.MAX_VALUE  Cint intValue()	Returns the substring beginning at index from and ending at index to - 1 Returns substring(from, length()) Returns the index of the first occurrence of str; returns -1 if not found Returns true if this is equal to other; returns false otherwise Returns a value <0 if this is less than other; returns zero if this is equal to other; returns a value >0 if this is greater than other  Integer Class Constructs a new Integer object that represents the specified int value The minimum value represented by an int or Integer Returns the value of this Integer as an int
int to)  String substring(int from)  Ant indexOf(String str)  Repoolean equals(String other)  Ant compareTo(String other)  Enteger(int value)  Enteger.MIN_VALUE  Enteger.MAX_VALUE  Ent	Returns substring(from, length()) Returns the index of the first occurrence of str; returns -1 if not found Returns true if this is equal to other; returns false otherwise Returns a value <0 if this is less than other; returns zero if this is equal to other; returns a value >0 if this is greater than other  Integer Class Constructs a new Integer object that represents the specified int value The minimum value represented by an int or Integer The maximum value represented by an int or Integer Returns the value of this Integer as an int
Int indexOf(String str)  Repoolean equals(String other)  Repoo	Returns the index of the first occurrence of str; returns -1 if not found Returns true if this is equal to other; returns false otherwise Returns a value <0 if this is less than other; returns zero if this is equal to other; returns a value >0 if this is greater than other Integer Class  Constructs a new Integer object that represents the specified int value The minimum value represented by an int or Integer  Che maximum value of this Integer as an int
coolean equals(String other) Reconstruction of the compare To(String oth	Returns true if this is equal to other; returns false otherwise Returns a value <0 if this is less than other; returns zero if this is equal to other; returns a value >0 if this is greater than other  Integer Class Constructs a new Integer object that represents the specified int value The minimum value represented by an int or Integer The maximum value represented by an int or Integer Returns the value of this Integer as an int
Integer(int value)  Integer.MIN_VALUE  Integer.MAX_VALUE  Integer.MAX_VALUE  Integer.MAX_VALUE  Integer.MAX_VALUE  Integer.MAX_VALUE	Returns a value <0 if this is less than other; returns zero if this is equal to other; returns a value >0 if this is greater than other  Integer Class Constructs a new Integer object that represents the specified int value the minimum value represented by an int or Integer The maximum value represented by an int or Integer Returns the value of this Integer as an int
Integer(int value)  Integer.MIN_VALUE  Integer.MAX_VALUE  Int intValue()	Integer Class Constructs a new Integer object that represents the specified int value The minimum value represented by an int or Integer The maximum value represented by an int or Integer Returns the value of this Integer as an int
Integer.MIN_VALUE TI Integer.MAX_VALUE TI Int intValue() Re	Constructs a new Integer object that represents the specified int value The minimum value represented by an int or Integer The maximum value represented by an int or Integer Returns the value of this Integer as an int
Integer.MIN_VALUE TI Integer.MAX_VALUE TI Int intValue() Re	The minimum value represented by an int or Integer The maximum value represented by an int or Integer Returns the value of this Integer as an int
Integer.MAX_VALUE TI	The maximum value represented by an int or Integer Returns the value of this Integer as an int
nt intValue() Re	Returns the value of this Integer as an int
	-
Oouble(double value) C	Double Class
ouble(double value) C	
,	Constructs a new Double object that represents the specified double val
louble doubleValue()	Returns the value of this Double as a double
	Math Class
tatic int abs(int x) Re	Returns the absolute value of an int value
tatic double abs(double x) Re	Returns the absolute value of a double value
	Returns the value of the first parameter raised to the power of the second parameter
tatic double sqrt(double x) Re	Returns the positive square root of a double value
tatic double random()	Returns a double value greater than or equal to 0.0 and less than 1.0
	ArrayList Class
nt size()	Returns the number of elements in the list
ooolean add(E obj) A	Appends obj to end of list; returns true
el	nserts obj at position index (0 $\leq$ index $\leq$ size), moving elements at position index and higher to the right (adds 1 to their indices) and adds 1 to size
get(int index) Re	Returns the element at position index in the list
	Replaces the element at position index with obj; returns the element ormerly at position index
ļi	Removes element from position $index$ , moving elements at position $index + 1$ and higher to the left (subtracts 1 from their indices) and subtracts rom size; returns the element formerly at position $index$
	Object Class
